A-level PHYSICS

Paper 1

ALevelPhysicsOnline.com

Wednesday 24 May 2023 Afternoon Time allowed: 2 hours

Materials

For this paper you must have:
- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

Instructions
- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

Information
- The marks for questions are shown in brackets.
- The maximum mark for this paper is 85.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

For Examiner's Use

Do not write outside the box

Section A

Answer **all** questions in this section.

0 1 The neutral lambda particle Λ^0 is a baryon with a strangeness of -1

One possible decay for a Λ^0 is

$$\Lambda^0 \rightarrow \pi^0 + n$$

s quark

0 1 . 1 Deduce the quark structure of a Λ^0.

[1 mark]

$\Lambda^0 \rightarrow u\bar{u} + udd$ or $\Lambda^0 \rightarrow d\bar{d} + udd$

s quark decays to a d quark

$\therefore$ uds ✓

0 1 . 2 State and explain which interaction is involved in this decay.

[2 marks]

Weak interaction ✓, as strange quark decays ✓ (strangeness goes from -1 to 0).

0 1 . 3 An antiparticle of the neutral lambda particle decays into a neutral pion and particle **X**.

Identify **X**.

[1 mark]

Anti-neutron ✓

$\bar{u}\bar{d}\bar{s} \rightarrow u\bar{u} + udd$ or $\bar{u}\bar{d}\bar{s} \rightarrow d\bar{d} + udd$

Do not write outside the box

0 1 . 4 The rest energy of a Λ^0 is equal to the energy of a photon with a frequency of 2.69×10^{23} Hz.

Determine, in MeV, the rest energy of a Λ^0.

[1 mark]

$E = hf = 6.63 \times 10^{-34} \times 2.69 \times 10^{23}$

$= 1.78 \times 10^{-10}$ J

$\div 1.6 \times 10^{-19} = 1.11 \times 10^{9}$ eV

$\therefore 1.11 \times 10^{3}$ MeV

rest energy = 1.11×10^3 ✓ MeV

0 1 . 5 The discovery of particles such as the Λ^0 is made by large international research teams.

Suggest **one** reason for this.

[1 mark]

Research is expensive and requires funding from many countries. ✓

6

Turn over for the next question

Do not write outside the box

There are no questions printed on this page

DO NOT WRITE ON THIS PAGE
ANSWER IN THE SPACES PROVIDED

Do not write outside the box

0 2 In 2021 the world land speed record was $1230\ \text{km h}^{-1}$.
This was the average speed achieved by a jet-powered car in two runs. Each run was measured over a distance of $1.61\ \text{km}$.

0 2 . 1 The average speed for one of these runs was $343\ \text{m s}^{-1}$.

Calculate, in s, the time taken for the car to complete the other run.

[2 marks]

$V_{av} = \frac{1230 \times 1000}{60 \times 60} = 341.67\ ms^{-1}$

$341.67 = \frac{343 + V}{2}$ $V = 340.33\ ms^{-1}$ ✓

$V = \frac{s}{t}$ $t = \frac{s}{v} = \frac{1610}{340.33} = 4.73$

time = 4.73 ✓ s

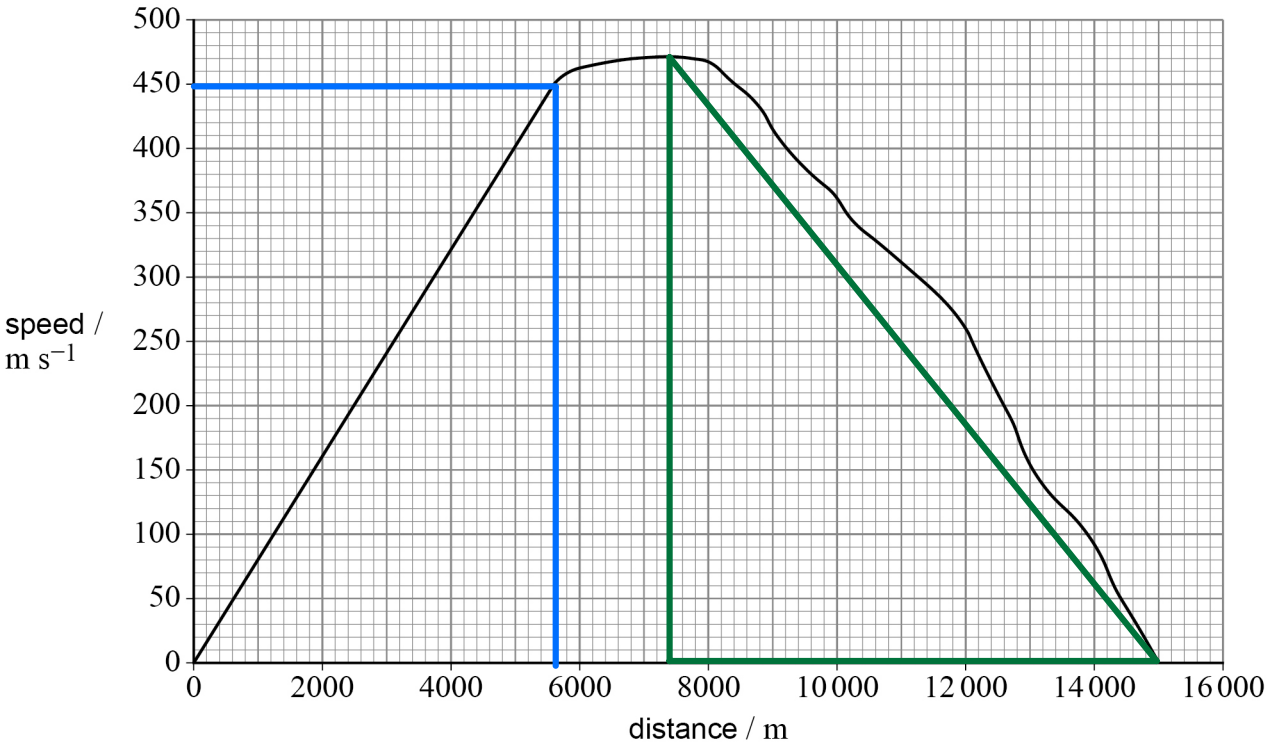
Question 2 continues on the next page

Do not write outside the box

0 2 . 2 Engineers are designing a new jet-powered car to break this record.

Figure 1 shows the variation of speed with distance for the car, as predicted by the engineers.

Figure 1



The car reaches its maximum acceleration when it is 5600 m from the start.
At this point the mass of the car is 6.50×10^3 kg.

Determine the kinetic energy of the car at its maximum acceleration.

[2 marks]

$v = 450\ m s^{-1}$ ✓

$E_k = \frac{1}{2}mv^2 = \frac{1}{2} \times 6.50 \times 10^3 \times 450^2$

$= 6.58 \times 10^8$ J

kinetic energy = 6.58×10^8 ✓ J

Do not write outside the box

0 2 . 3 At any point on the graph in **Figure 1**, the acceleration is given by:

acceleration = speed × gradient of line

When the car is at its maximum acceleration, the power input to the jet engines is 640 MW.

Calculate the percentage of the input power used to accelerate the car at its maximum acceleration.

[4 marks]

Gradient = $\frac{\Delta y}{\Delta x} = \frac{450}{5600} = 0.080\ s^{-1}$ ✓

$a = v \times \text{gradient} = 450 \times 0.080 = 36.16\ ms^{-2}$

$F = ma = 6.50 \times 10^3 \times 36.16 = 2.35 \times 10^5\ N$ ✓

$P = Fv = 2.35 \times 10^5 \times 450 = 1.058 \times 10^8\ W$ ✓

$\eta = \frac{105.8\ MW}{650\ MW} \times 100 = 16.3$

percentage of input power = 16 ✓ %

0 2 . 4 Scientists recommend that the average deceleration of the driver of the car should be less than $3g$.

Deduce whether the average deceleration is less than $3g$.

[2 marks]

$s = 15000 - 7400 = 7600\ m$

$u = 470\ ms^{-1}$

$v = 0\ ms^{-1}$

$a = ?$

t

$a = \frac{v^2 - u^2}{2s} = \frac{0 - 470^2}{2 \times 7600} = -14.5\ ms^{-2}$ ✓

$a_{av} = \frac{-14.5}{-9.81} = 1.48g < 3g$

$\therefore$ less than $3g$ ✓

10

Do not write outside the box

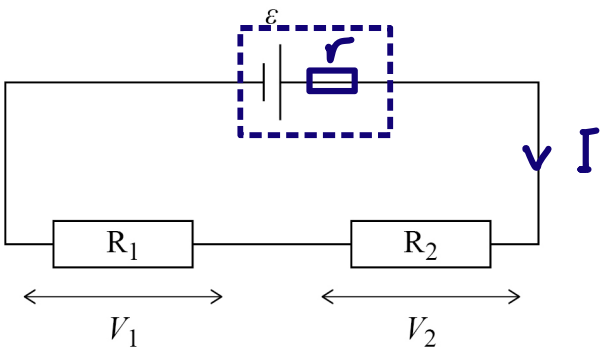
There are no questions printed on this page

DO NOT WRITE ON THIS PAGE
ANSWER IN THE SPACES PROVIDED

Do not write outside the box

0 3 . 1 In **Figure 2** the cell has emf ε and internal resistance r.

Figure 2



The current in the circuit is I.

The potential difference (pd) across R_1 is V_1 and the pd across R_2 is V_2.

Explain how the law of conservation of energy applies in this circuit.
You should consider the movement of one coulomb of charge around the circuit.

[2 marks]

emf is the energy supplied to the circuit per coulomb of charge ∴ 1C gains ε J of energy as it passes through the cell. ✓

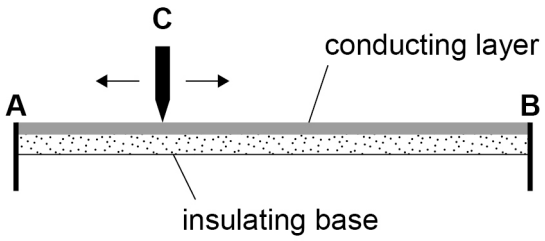
∴ ε J of energy must be dissipated in the circuit i.e.

$\varepsilon = IR_1 + IR_2 + Ir$ ✓

Question 3 continues on the next page

Figure 3 shows a variable resistor made with a thin conducting layer on an insulating base.

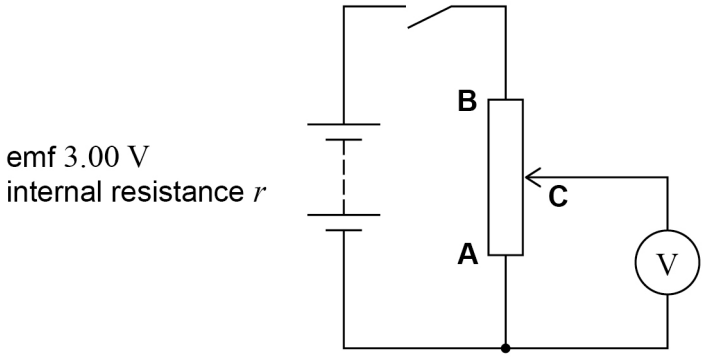
Figure 3



The conducting layer has constant width and thickness and has connections at the ends **A** and **B**.
C is a sliding contact that can move along the surface of the conducting layer between **A** and **B**.

Figure 4 shows a circuit that uses the variable resistor as a potential divider.

Figure 4



The variable resistor is connected to a battery of emf $3.00\ \text{V}$ and internal resistance r.
The resistance of the conducting layer between **A** and **B** is $125\ \Omega$.

Do not write outside the box

0 3 . 2 The sliding contact **C** is moved to end **B** of the variable resistor. The switch is closed. The digital voltmeter reads 2.89 V.

Show that r is approximately 4.8 Ω.

[3 marks]

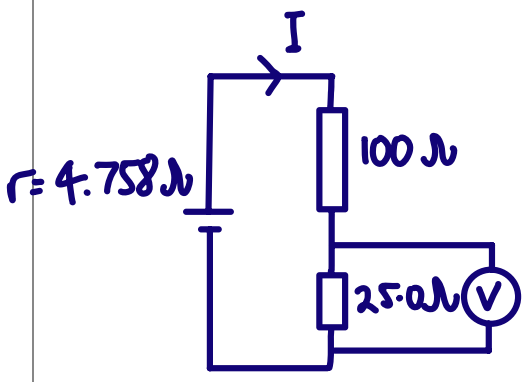
$\varepsilon = V + Ir$ $\quad I = \frac{V}{R} = \frac{2.89}{125} = 0.02312$ ✓

$r = \frac{\varepsilon - V}{I}$ ✓ $= \frac{3.00 - 2.89}{0.02312} = 4.758$ ✓ $\approx 4.8\ \Omega$

0 3 . 3 **C** is set at $\frac{1}{5}$ of the distance between **A** and **B**. The thickness of the conducting layer is uniform so the resistance between **A** and **C** is 25.0 Ω.

Determine the voltmeter reading at this setting.

[2 marks]



$I = \frac{V}{R}$ = constant

$\frac{V_1}{R_1} = \frac{V_T}{R_T}$ ✓ $\quad V_1 = 25.0 \times \frac{3.00}{4.758 + 100 + 25.0}$

voltmeter reading = 0.578 V ✓ V

Question 3 continues on the next page

Do not write outside the box

0 3 . 4 **Figure 5** shows a variable resistor similar to the one shown in **Figure 3** but with the following three manufacturing faults:

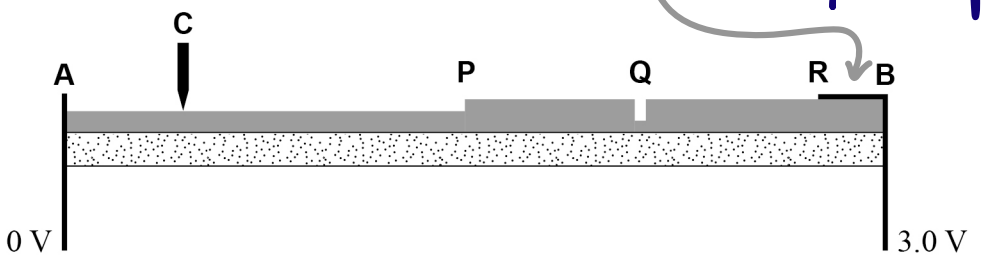
- at **P** the conducting layer changes in thickness so that **AP** is thinner than **PB**
- at **Q** there is a scratch into the surface of the conducting layer and across its full width
- from **R** to **B** the conducting connector is laid over the conducting layer.

The width of the conducting layer is constant.

A pd of 3.0 V is applied across **A** and **B**.
C is moved from **A** to **B**.

Conductor
∴ no resistance
∴ no pd dropped

Figure 5

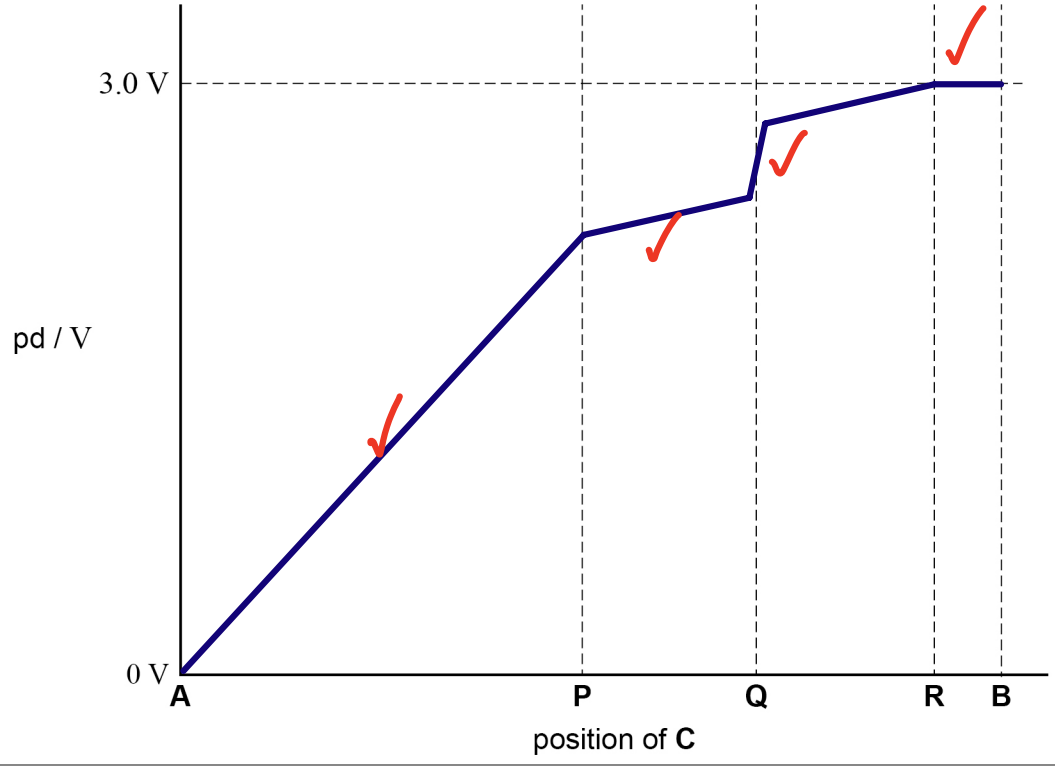


Sketch, on the axes in **Figure 6**, a graph to show how the pd between **A** and **C** varies as **C** is moved from **A** to **B**.

[4 marks]

$V \propto R \propto \frac{1}{A}$ ∴ thinner → greater increase in V

Figure 6



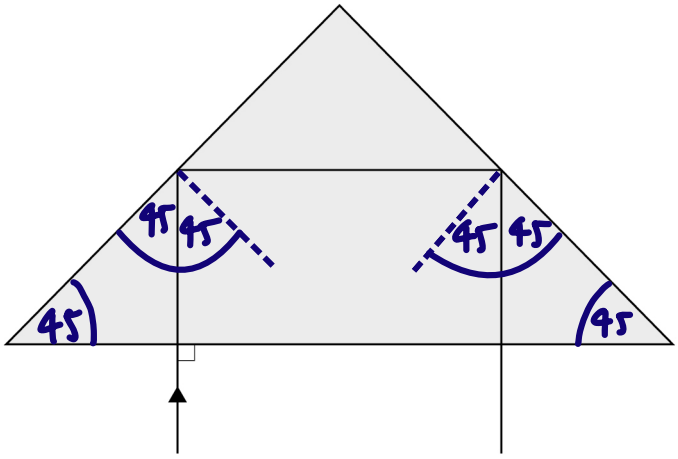
11

Do not write outside the box

0 4 Porro prisms are used in binoculars to reverse the path of the light. The prism is in the shape of a right-angled isosceles triangle.

Figure 7 shows a ray of light, at normal incidence on the longest side, passing through a glass Porro prism.

Figure 7



The critical angle for light in the prism is 41.5°.

0 4 . 1 Show that the glass used to make the prism has a refractive index of about 1.5

[1 mark]

$\sin\theta_c = \frac{1}{n}$ $\quad n = \frac{1}{\sin 41.5} = 1.51$ ✓ ≈ 1.5

0 4 . 2 Explain why the ray emerges parallel to the incident ray.

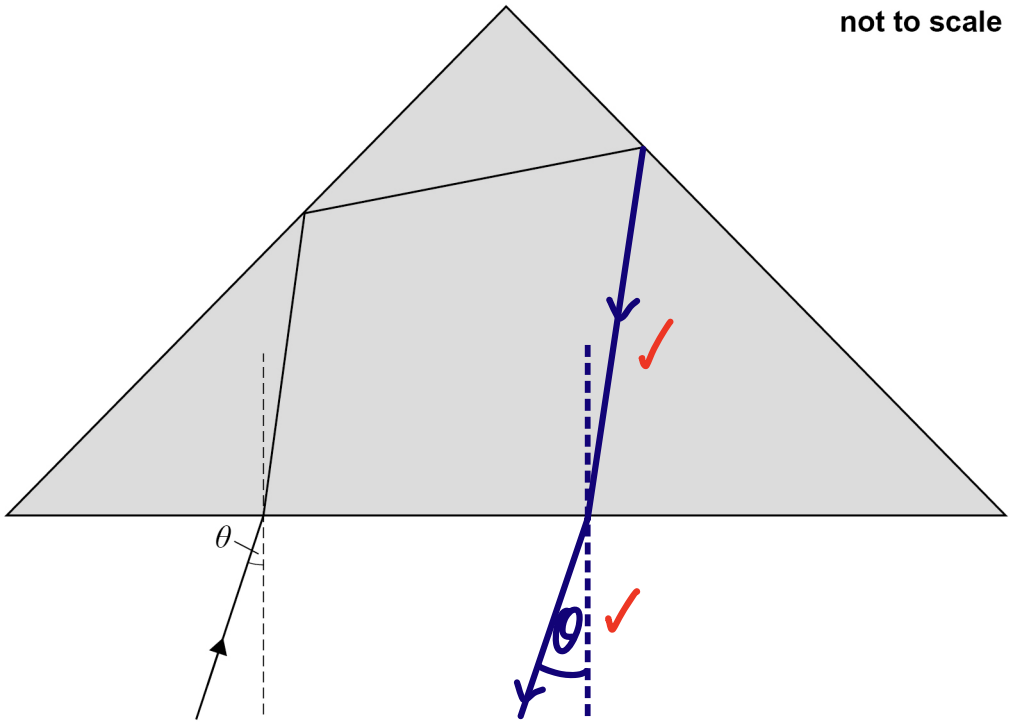
[2 marks]

Each angle of incidence = 45° ∴ $> \theta_c$ ✓ and therefore TIR occurs. Angle of incidence when leaving the block is 0° ∴ parallel to incident ray. ✓

Question 4 continues on the next page

Figure 8 shows a ray of light entering the prism at an angle of incidence θ and reflecting off one of the shorter sides.

Figure 8



θ is the largest angle of incidence for which all of the light leaves through the longest side.

0 4 . 3 Draw on **Figure 8** the path of the ray of light as it continues inside the prism and emerges from the longest side.

[3 marks]

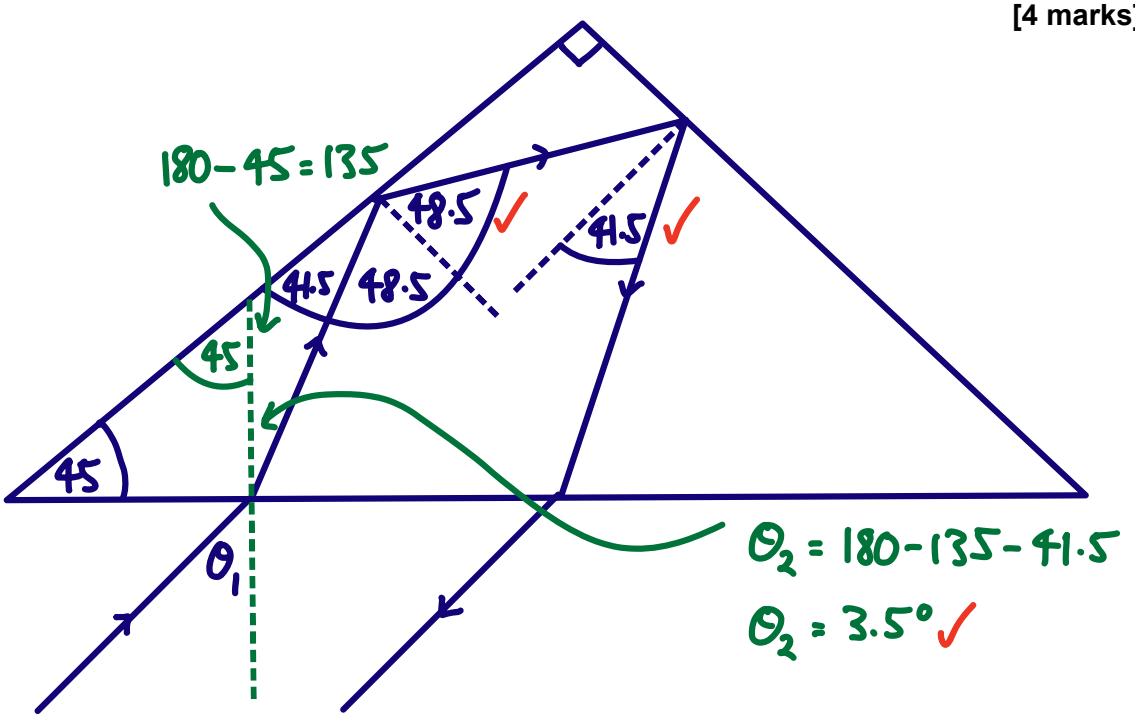
We know TIR occurs ∴ ray reflected off right side is parallel to incident ray on left side. Ray leaving block is parallel to ray incident on block.

Do not write outside the box

0 4 . 4 When the angle of incidence is greater than θ, some of the light escapes the prism through one of the shorter sides.
Assume that the refractive index is 1.5 and the critical angle is $41.5°$.

Show that θ is about $5°$.
You can use **Figure 8** in your answer.

[4 marks]



$$n_1 \sin\theta_1 = n_2 \sin\theta_2$$

$$1 \times \sin\theta = 1.5 \sin 3.5$$

$$\theta = 5.25 \approx 5°$$

Question 4 continues on the next page

Do not write outside the box

0 4 . 5 A manufacturer wants to make a prism with a larger value of θ.

Two alternative changes to the original design of the prism are suggested:

1. use a prism of the original glass in the shape of an equilateral triangle, as shown in **Figure 9**
2. use a prism of the original shape made from glass with a smaller refractive index, as shown in **Figure 10**.

Figure 9

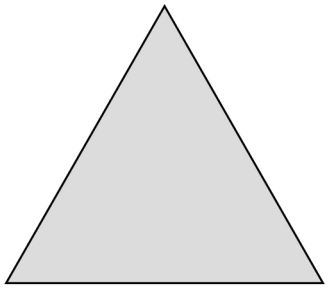


Figure 10

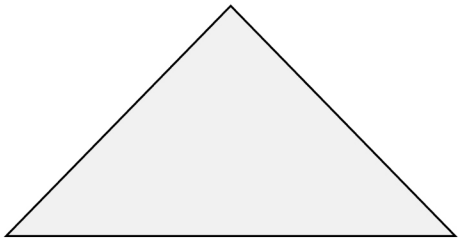


Discuss whether either of the two suggestions would work.

[4 marks]

1 Light would not leave the prism at the original angle. ✓ It would also escape from the second reflection (no TIR) ∴ it does not work. ✓

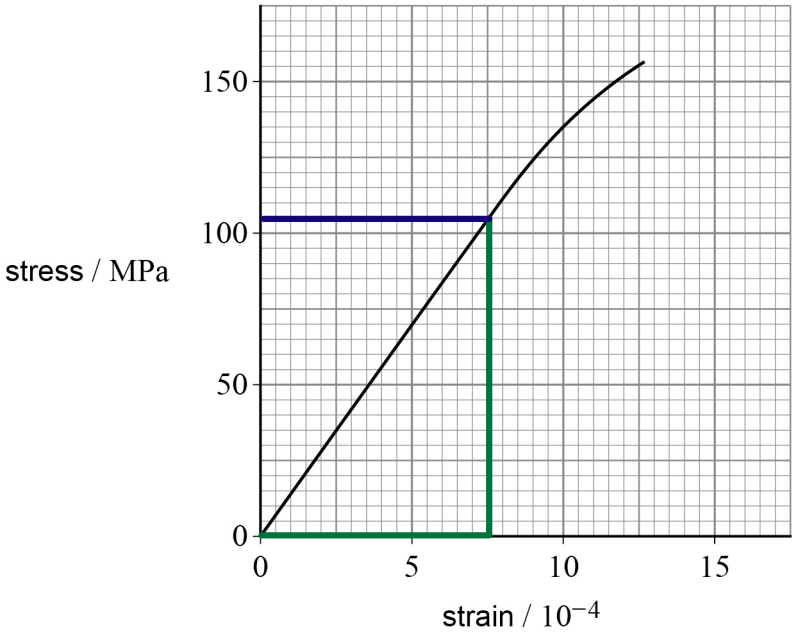
2 $\sin \theta_c = \frac{1}{n}$ n is smaller ∴ θ_c is greater ✓ ∴ value of θ would be reduced, ✓ so it would not work as effectively.

14

Do not write outside the box

0 5 **Figure 11** shows the stress–strain graph for a metal in tension up to the point at which it fractures.

Figure 11



0 5 . 1 Determine, using **Figure 11**, the Young modulus of the metal.

[1 mark]

Gradient = $\frac{\sigma}{\varepsilon} = \frac{105 \times 10^6}{7.5 \times 10^{-4}} = 1.4 \times 10^{11}$

Young modulus = 1.4×10^{11} ✓ Pa

0 5 . 2 Explain how the graph shows that this metal is brittle.

[1 mark]

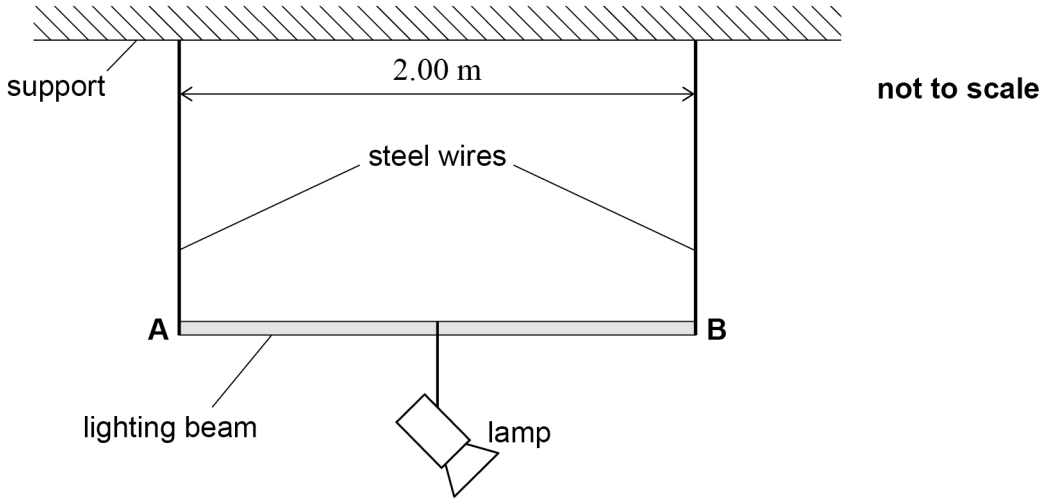
Very little plastic deformation before fracture ✓ (not much increase in strain beyond linear section).

Question 5 continues on the next page

Do not write outside the box

Figure 12 shows a uniform rigid lighting beam **AB** suspended from a fixed horizontal support by two identical vertical steel wires. A lamp is attached to the midpoint of **AB**.

Figure 12



The unloaded length of each steel wire was 1.20 m before it was attached to **AB**. **AB** is horizontal.

mass of **AB** = 4.4 kg
mass of lamp = 16.0 kg
distance between wires = 2.00 m
diameter of each wire = 0.800 mm
Young modulus of steel = 2.10×10^{11} Pa

0 5 . 3 Calculate the extension of each wire.

[3 marks]

$W = mg = (4.4 + 16.0) \times 9.81 = 200.124$ N

F on each wire $= W/2 = 100.062$ N ✓

$E = \frac{FL}{A\Delta L}$ $\quad \Delta L = \frac{FL}{EA} = \frac{4FL}{E\pi d^2}$ ✓

$$\Delta L = \frac{4 \times 100.062 \times 1.20}{2.10 \times 10^{11} \times \pi \times (0.800 \times 10^{-3})^2} = 1.14 \times 10^{-3}$$

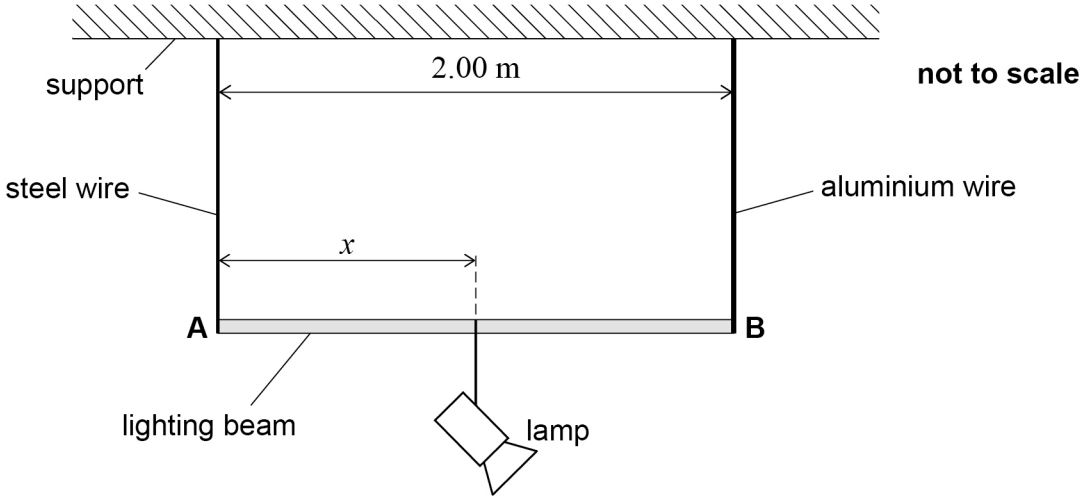
extension = 1.1×10^{-3} ✓ m

Do not write outside the box

0 5 . 4 The right-hand steel wire is removed and replaced with an aluminium wire of diameter $1.60\ \text{mm}$. The unloaded length of the aluminium wire is the same as that of the original steel wire.

When the lamp is at the midpoint of **AB**, one of the wires extends more than the other so that **AB** is not horizontal. To make **AB** horizontal the lamp has to be moved to a distance x from **A**. **Figure 13** shows the new arrangement.

Figure 13



The Young modulus of aluminium is $7.00 \times 10^{10}\ \text{Pa}$.

Deduce distance x.

[5 marks]

AB horizontal ∴ ΔL same for both wires

$$\Delta L = \frac{4F_s L}{E_s \pi d_s^2} = \frac{4F_a L}{E_a \pi d_a^2} \qquad \frac{F_s}{E_s d_s^2} = \frac{F_a}{E_a d_a^2} \checkmark$$

$$F_s = F_a \times \frac{2.10}{0.700} \times \frac{0.800^2}{1.60^2} = \frac{3.00}{4.00} F_a = 0.750 F_a \checkmark$$

$$F_a + F_s = 200.124 \qquad F_a + 0.750 F_a = 200.124$$

$$F_a = 200.124 / 1.75 = 114.4\ \text{N} \checkmark$$

$$\curvearrowright M_A \quad (16_g . x) + (4.4_g \times 1.00) = 114.4 \times 2.00 \checkmark$$

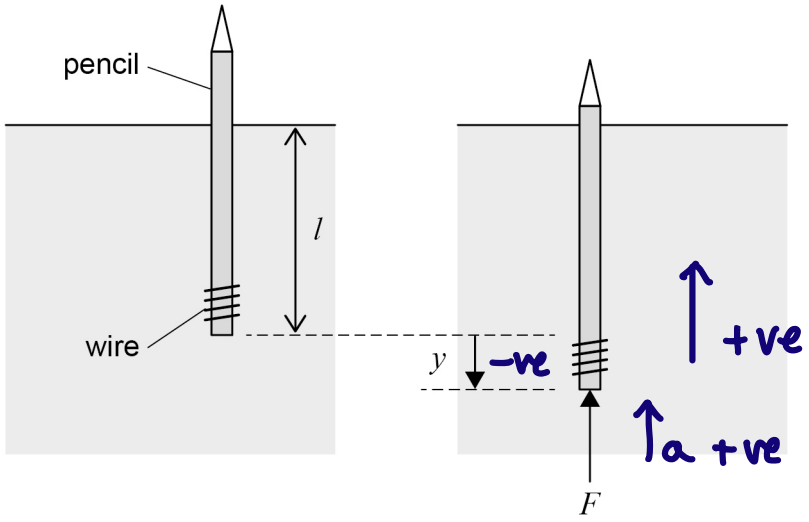
$$x = 1.183$$

$x =$ 1.18 ✓ m

10

0 6 A pencil is weighted with a thin coil of wire. The volume of the wire is negligible. **Figure 14** shows the pencil and wire floating in equilibrium in water.

Figure 14 **Figure 15**



In **Figure 14** the combined weight of the pencil and wire is equal to an upwards force called the buoyancy force. The length of the pencil that is submerged is l.
A student pushes the pencil down through a displacement y as shown in **Figure 15**.
The buoyancy force is now greater than the weight.
There is a resultant upward force F acting on the pencil when the student releases it.
The magnitude of F for any value of y is given by

$$F = A\rho g y$$

where A is the cross-sectional area of the pencil
ρ is the density of water
g is the acceleration due to gravity.

The pencil is pushed down and released. The pencil then oscillates vertically about the equilibrium position.

Do not write outside the box

0 6 . 1 Show that the pencil moves with simple harmonic motion.

[2 marks]

$F = -A\rho g y$ $\quad F = ma$ ✓

$-A\rho g y = ma$ $\quad a = -\frac{A\rho g}{m} y$

A, ρ, g and m are all constant ∴ $a \propto -y$ as a is positive when y is negative. ✓

$a \propto -y$ ∴ SHM

0 6 . 2 The time period T of the vertical oscillations is given by

$$T = 2\pi\sqrt{\frac{l}{g}}$$

The measured value of l in **Figure 15** is 85 mm.
The pencil is pushed down 5.0 mm and released.

Calculate the maximum acceleration of the pencil.

[2 marks]

$\omega = \frac{2\pi}{T}$, $T = 2\pi\sqrt{\frac{l}{g}}$

$\omega = \frac{2\pi}{2\pi}\sqrt{\frac{g}{l}}$ $\quad \omega^2 = \frac{g}{l}$ ✓

$a_{max} = -\omega^2 A = -\frac{g}{l} A = -\frac{9.81}{85\times10^{-3}} \cdot 5.0\times10^{-3} = -0.577$

maximum acceleration = 0.58 ✓ $\mathrm{m\,s^{-2}}$

Question 6 continues on the next page

Do not write outside the box

A ship floating in the sea can be modelled by the pencil floating in water.
The ship can oscillate vertically. These oscillations are called heave oscillations.

Wave motion causes forced oscillations of the ship. Under certain conditions, heave resonance may then occur.

0 6 . 3 Explain what is meant by resonance.

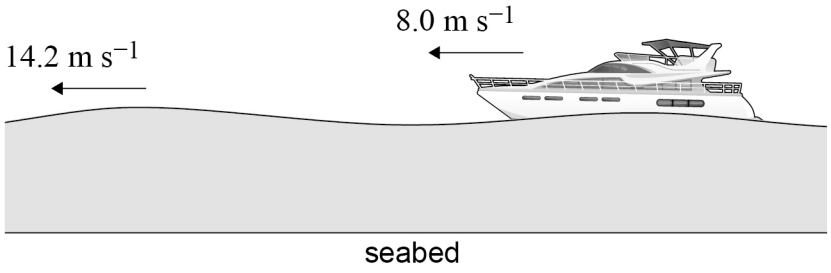
[2 marks]

Frequency of the forced vibrations equals the natural frequency of a system, ✓ causing it to oscillate at maximum amplitude. ✓

0 6 . 4 **Figure 16** shows a ship moving through continuous waves of wavelength $118\ \text{m}$ and velocity $14.2\ \text{m s}^{-1}$.

The ship is moving steadily at $8.0\ \text{m s}^{-1}$ relative to the seabed in the same direction as the waves.

Figure 16



Do not write outside the box

The natural frequency of heave oscillations of the ship is $0.13\ \text{Hz}$.

A crew member needs an emergency operation. The ship's doctor is confident that she can do the operation if the ship remains fairly steady.

There are two options:

- stop the ship's motors and loosely anchor the ship to the seabed
- continue to sail the ship at $8.0\ \text{m s}^{-1}$ in the same direction.

Deduce which is the better option.
Support your answer with a calculation.

[3 marks]

Stationary: Wave frequency, $f = \frac{v}{\lambda} = \frac{14.2}{118} = 0.120\ \text{Hz}$

This is close to natural frequency ✓

Moving: If the ship continues moving at $8.0\ \text{ms}^{-1}$

$f = \frac{14.2 - 8.0}{118} = 0.053\ \text{Hz}$ ✓

The frequency of waves against the moving ship will be further away from the resonant frequency, so the amplitude will be lower which would be the better option for the doctor and patient. ✓

9

END OF SECTION A

Do not write outside the box

Section B

Each of Questions **07** to **31** is followed by four responses, **A**, **B**, **C** and **D**.

For each question select the best response.

Only **one** answer per question is allowed.
For each question, completely fill in the circle alongside the appropriate answer.

CORRECT METHOD 

WRONG METHODS 

If you want to change your answer you must cross out your original answer as shown. 

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown. 

You may do your working in the blank space around each question but this will not be marked. Do **not** use additional sheets for this working.

0 7 Which combination of an object's speed and journey time gives a distance travelled of 1 mm?

[1 mark]

$s = vt$

	Speed	Journey time	
A	$10\ \mu m\ s^{-1}$	100 s	✓ 10^{-3}
B	$10\ km\ s^{-1}$	0.01 μs	10^{-4}
C	$1\ nm\ s^{-1}$	1 Gs	10^{0}
D	$0.1\ Mm\ s^{-1}$	100 ns	10^{-2}

Do not write outside the box

0 8 A person jumps as high as she can from a standing position.

What is a reasonable estimate of her speed just after she leaves the ground?

[1 mark]

A $2\ \text{m s}^{-1}$ ○

B $4\ \text{m s}^{-1}$ ● ✓

C $8\ \text{m s}^{-1}$ ○

D $10\ \text{m s}^{-1}$ ○

$s \approx 0.60$
$u = ?$
$v = 0$
$a = -9.81$
t

$v^2 = u^2 + 2as$

$u = \sqrt{-2as}$

$u = \sqrt{-2 \times 9.81 \times 0.60}$

$u = 3.4\ \text{ms}^{-1}$

0 9 A nucleus contains N neutrons and Z protons.

Which combination of N and Z gives a nucleus with the greatest specific charge?

[1 mark]

	N	Z	
A	6	5	○ 5/11
B	8	7	● ✓ 7/15
C	16	13	○ 13/29
D	20	17	○ 17/37

$\frac{Q}{m} \propto \frac{Z}{N+Z}$

1 0 Which statement about muons is correct?

[1 mark]

A They consist of a quark and an antiquark. ○

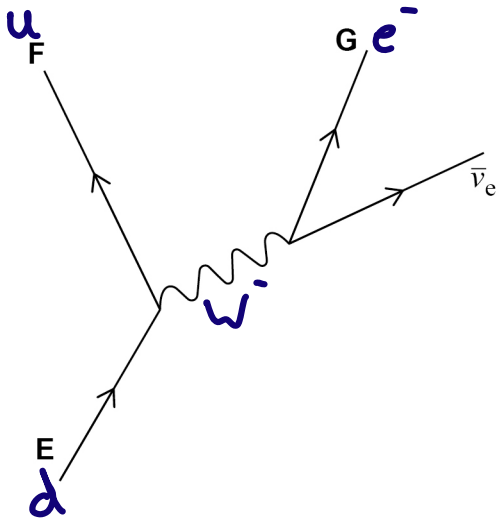
B They include pions and kaons. ○

C They are subject to the strong interaction. ○

D They decay into electrons. ● ✓

Do not write outside the box

1 1 The diagram represents a quark change in which an electron antineutrino is produced.



What are **E**, **F** and **G**?

[1 mark]

	E	F	G	
A	up quark	down quark	β^-	⬭
B	down quark	up quark	β^-	⬬ ✓
C	up quark	down quark	β^+	⬭
D	down quark	up quark	β^+	⬭

1 2 Photoelectrons are released when monochromatic light with a photon energy of 4.2×10^{-19} J is incident on a metal surface.
The work function of the surface is 2.4 eV.

What is the maximum speed of the photoelectrons as they leave the surface?

[1 mark]

A 1.3×10^6 m s^{-1} ⬭

B 6.3×10^5 m s^{-1} ⬭

C 2.8×10^5 m s^{-1} ⬬ ✓

D 2.0×10^5 m s^{-1} ⬭

$E_{K(max)} = hf - \phi$

$\frac{1}{2}mv^2 = 4.2\times10^{-19} - (2.4\times1.6\times10^{-19})$

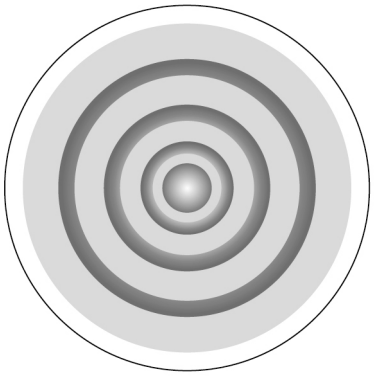
$v = \sqrt{\frac{2\times3.6\times10^{-19}}{9.11\times10^{-31}}}$

$= 2.81\times10^5 \text{ ms}^{-1}$

Do not write outside the box

1 3 Electrons with a certain kinetic energy pass through a powdered crystalline sample and are incident on a fluorescent screen.
The diagram shows a sketch of the diffraction pattern produced.

A change is made and this second pattern is produced.



Which change could produce the second pattern?

[1 mark]

A decreasing the kinetic energy of the electrons ✓ $\lambda \uparrow$

B replacing the electrons with protons with the same kinetic energy $\lambda \downarrow$

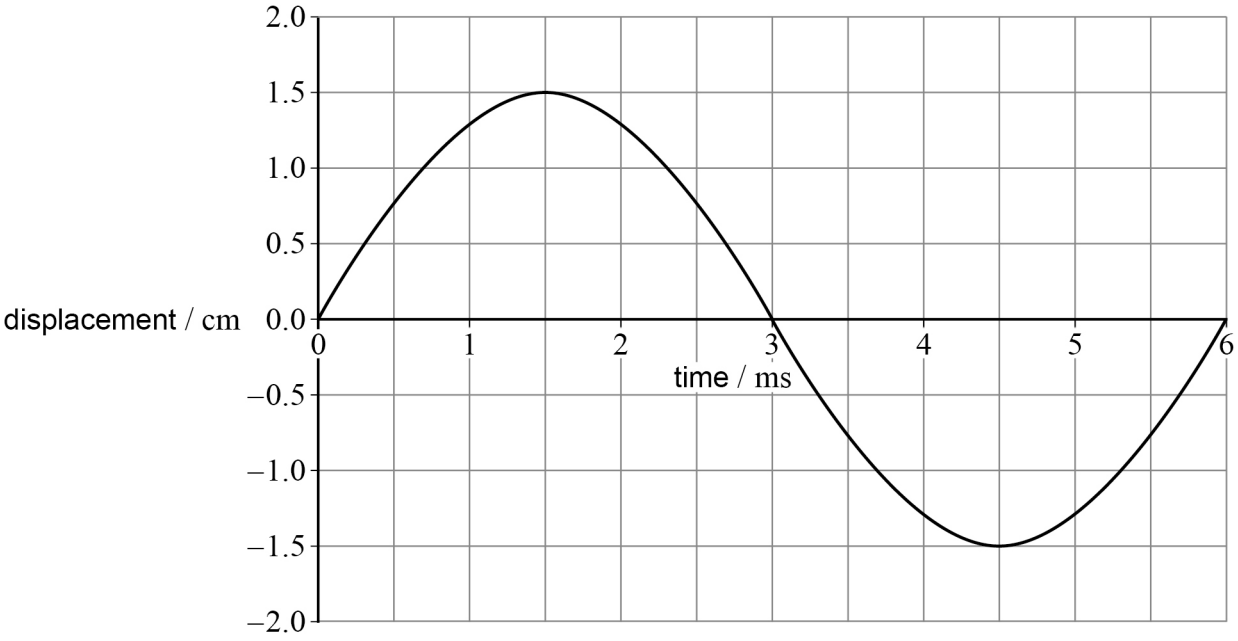
C using a crystalline sample with a wider spacing between its atoms diff $\downarrow$

D moving the screen closer to the crystalline sample

$\lambda = \frac{h}{mv}$ $\downarrow v$ $\uparrow \lambda$ $\uparrow$ diffraction

Do not write outside the box

1 4 A string with a length of 1.2 m vibrates at its second harmonic.
The diagram shows the displacement–time graph for a point on the string.



What are the wavelength and frequency of the wave on the string?

[1 mark]

	Wavelength / m	Frequency / kHz	
A	0.6	0.17	⬭
B	0.6	0.34	⬭
C	1.2	0.17	⬬ ✓
D	1.2	0.34	⬭

$T = 6.0\,ms \quad f = 167\,Hz = 0.167\,kHz$

$L = 1.2\,m \quad$ 2nd harmonic $\therefore L = \lambda = 1.2\,m$

Do not write outside the box

1 5 A standing wave is created on a string.

Which statement about the two waves that create the standing wave is **not** correct?

[1 mark]

A They have the same frequency. ⬭

B They have a constant phase relationship. ⬬ ✓

C They travel in opposite directions. ⬭

D They have the same speed. ⬭

Phase difference causes interference ∴ standing wave

1 6 A double slit with a separation s is illuminated by light of wavelength λ.
Fringes with spacing w are produced on a screen placed a distance D from the slits.
The distance from the slits to the screen is changed to $\frac{D}{2}$.

Which combination of slit separation and wavelength produces a fringe spacing of $1.5w$ on the screen?

[1 mark]

	Slit separation	Wavelength	
A	$0.22s$	0.66λ	⬬ ✓ 3
B	$0.50s$	0.75λ	⬭ 1.5
C	$0.60s$	1.20λ	⬭ 2
D	$1.20s$	0.40λ	⬭ 1/3

$w_1 = \frac{\lambda D}{s}$ $\quad w_2 = \frac{\lambda_2 \frac{D}{2}}{s_2}$

$1.5\, w_1 = w_2$

$1.5 \frac{\lambda D}{s} = \frac{\lambda_2 \frac{D}{2}}{s_2}$ $\quad 3\frac{\lambda}{s} = \frac{\lambda_2}{s_2}$

Turn over for the next question

Do not write outside the box

1 7 A single narrow slit is illuminated with monochromatic light and a diffraction pattern is produced.

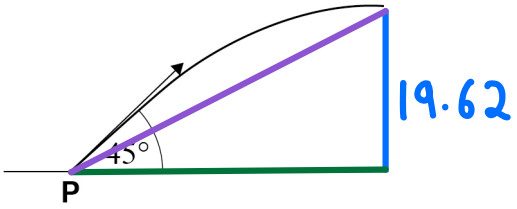
The slit width is increased. Increasing width causes less diffraction

What happens to the width and brightness of the central maximum of the diffraction pattern?

[1 mark]

	Width of central maximum	Brightness of central maximum	
A	increases	increases	⬭
B	increases	decreases	⬭
C	decreases	increases	● ✓
D	decreases	decreases	⬭

1 8 A ball is kicked from point **P** on level ground. The ball initially travels at 45° to the horizontal.
The ball reaches its maximum height after a time of 2.0 s.
Air resistance can be ignored.



What is the displacement of the ball from **P** when at its maximum height?

[1 mark]

A 20 m ⬭

B 40 m ⬭

C 45 m ● ✓

D 60 m ⬭

↑ s, u, v = 0, a = −9.81, t = 2.0

$v = u + at$

$u = 0 - 9.81 \times 2.0$

$u = 19.62 \text{ ms}^{-1}$

$s_v = \frac{1}{2}(u+v)t$

$s_v = \frac{1}{2}(19.62) \times 2.0 = 19.62$

$\rightarrow s_h = vt = 19.62 \times 2.0 = 39.24$

$s = \sqrt{s_h^2 + s_v^2} = \sqrt{39.24^2 + 19.62^2} = 43.9$

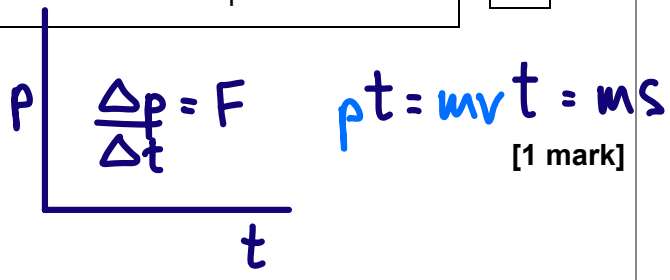
Do not write outside the box

1 9 An object is moving in a straight line. A graph is plotted to show the variation of the momentum of the object with time.

Which quantities can be calculated from the gradient of the graph and the area under the graph?

[1 mark]

	Gradient of graph	Area under graph	
A	power	mass × displacement	⬭
B	force	work done × time	⬭
C	power	work done × time	⬭
D	force	mass × displacement	● ✓



2 0 Which is a pair of vectors?

[1 mark]

A weight and work ⬭

B force and energy ⬭

C displacement and momentum ● ✓

D acceleration and power ⬭

2 1 Which statement about a superconducting metal is correct?

[1 mark]

A Its resistivity is small but not zero. ⬭

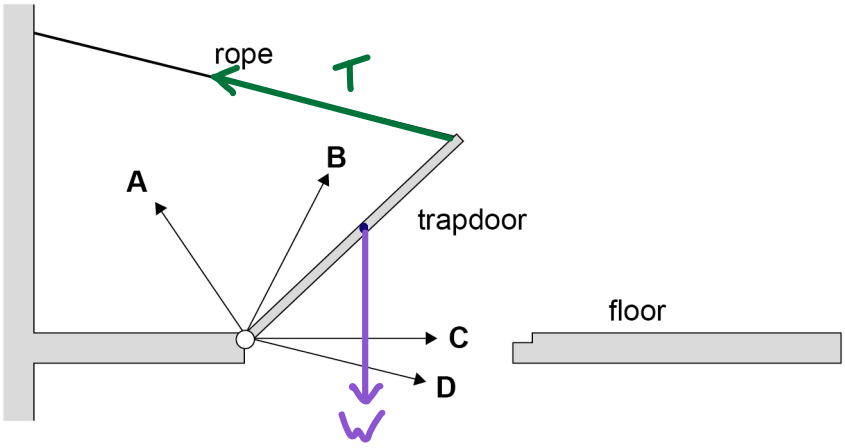
B A current in it causes no heating effect. ● ✓

C Its critical temperature is independent of the metal it is made from. ⬭

D Keeping it cold makes it too expensive to use. ⬭

Do not write outside the box

2 2 A heavy uniform trapdoor is hinged to the floor. It is held open by a rope as shown.



Which arrow shows the direction of the reaction force of the hinge on the trapdoor?

[1 mark]

A ⬭

B ⬬ ✓

C ⬭

D ⬭

Must be up to balance weight and vertical component of tension.

Must be to the right to balance the horizontal component of tension.

2 3 A sphere of mass m falls with speed v.
The resistive force on the sphere is kv, where k is a constant.

What is the terminal speed of the sphere?

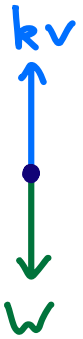
[1 mark]

A $\frac{mg}{k}$ ⬬ ✓

B $\frac{km}{g}$ ⬭

C kmg ⬭

D $\frac{k}{mg}$ ⬭



$W = kv$

$mg = kv$

$v = \frac{mg}{k}$

Do not write outside the box

2 4 A trolley moves down a slope with constant acceleration.
The mass of the trolley is doubled and the trolley moves down the same slope again.
Air resistance and friction are negligible.

Which is correct?

[1 mark]

A The accelerating force is unchanged. ○

B The accelerating force is halved. ○

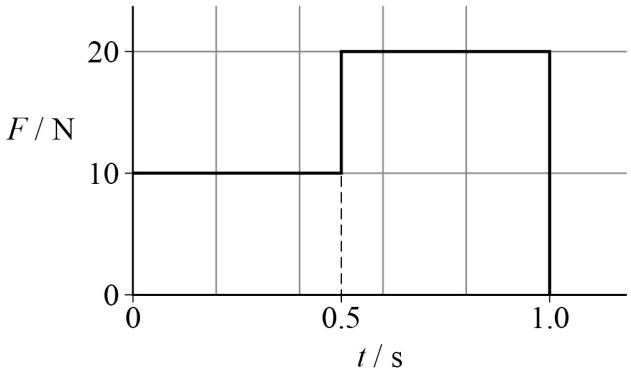
C The acceleration is unchanged. ● ✓ a independent of m

D The acceleration is halved. ○

F ∝ m

2 5 A variable force F acts on an object of mass $2.0\ \text{kg}$. The object is at rest at time $t = 0$

The graph shows the variation of F with t.



What is the speed of the object when $t = 1.0\ \text{s}$?

[1 mark]

A $3.75\ \text{m s}^{-1}$ ○

B $5.00\ \text{m s}^{-1}$ ○

C $7.50\ \text{m s}^{-1}$ ● ✓

D $15.0\ \text{m s}^{-1}$ ○

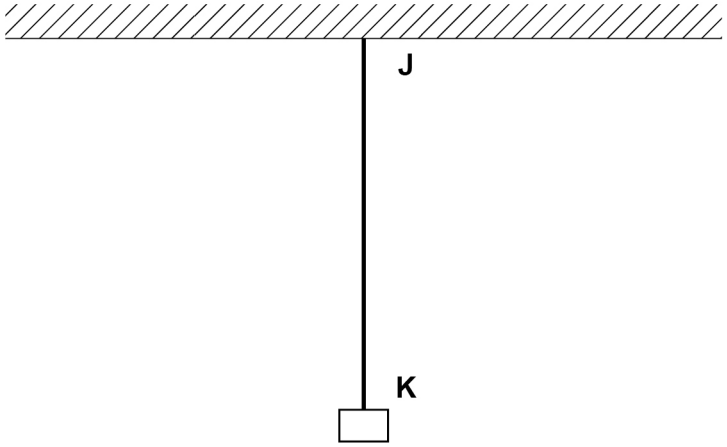
$F\Delta t = m\Delta v$

$\text{Area} = (10 \times 0.5) + (20 \times 0.5) = 15$

$\Delta v = \frac{15}{2.0} = 7.5\ \text{ms}^{-1}$

Do not write outside the box

2 6 A heavy cable is attached to a fixed support and carries a load at its lower end.

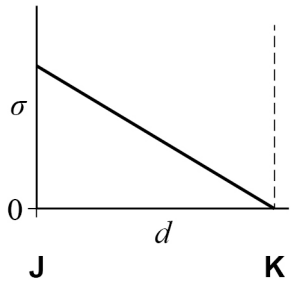


The weight of the cable is **not** negligible.
The cable has constant cross-sectional area and density.

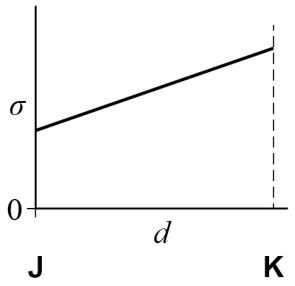
Which graph shows the variation of tensile stress σ in the cable with distance d from **J** to **K**?

[1 mark]

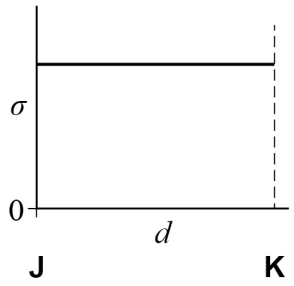
A



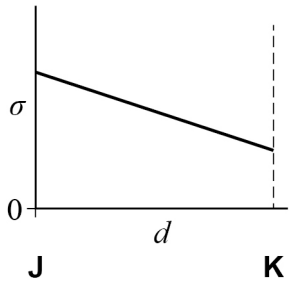
B



C



D



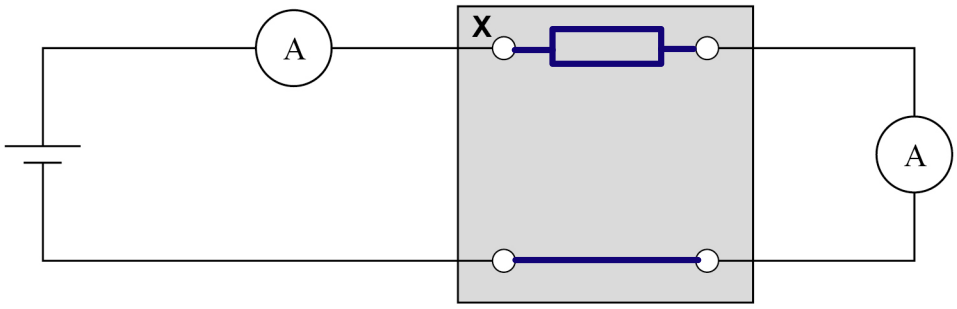
A ⬭
B ⬭
C ⬭
D ⬬ ✓

$\sigma = \frac{F}{A}$

F is max at J as the whole weight of the cable is acting on it.
F is min at K as no weight of cable acting.

Do not write outside the box

2 7 A box with four terminals is connected to a cell and two ammeters. The top left terminal is **X**.

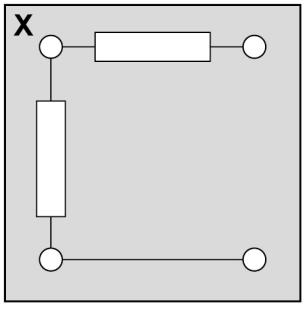


Each of the boxes **A** to **D** is connected into the circuit in turn. All the resistors have equal resistance.

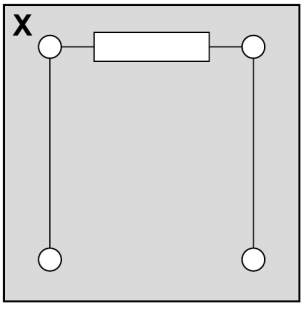
Which box gives the same reading on both ammeters?

[1 mark]

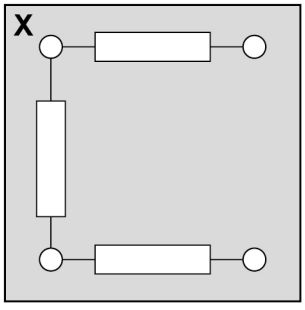
A



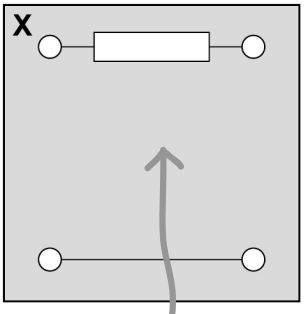
B



C



D



The only series circuit.

A ⬭

B ⬭

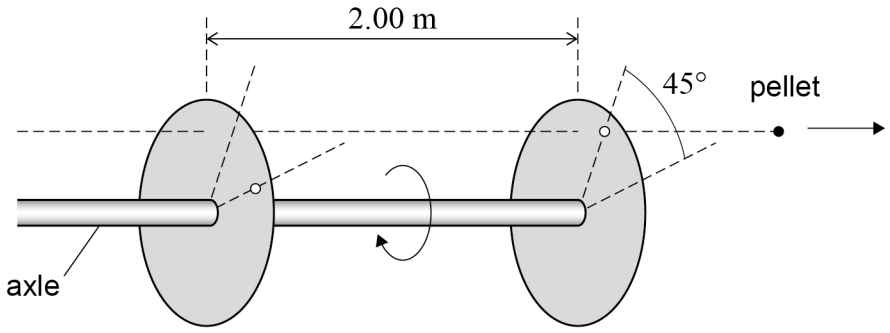
C ⬭

D ⬬ ✓

Turn over ►

Do not write outside the box

2 8 Two circular discs made of card rotate at constant speed on a common axle.



The discs are 2.00 m apart.

An air-gun pellet is fired parallel to the axle. The pellet makes holes in the discs.
The holes are separated by an angle of 45°.
The speed of the pellet between the discs is 300 m s^{-1}.

How many revolutions does each disc complete in one second?

[1 mark]

A 19 ●

B 118 ○

C 740 ○

D 1074 ○

$t = \frac{s}{v} = \frac{2.00}{300} = \frac{1}{150}\ s \equiv 45°$

$1\ rev = 360° = \frac{8}{150}\ s\ rev^{-1}$

$\therefore \frac{150}{8}\ rev\ s^{-1} = 18.75\ s^{-1}$

2 9 A resistor dissipates 100 W when connected across a 25 V supply with negligible internal resistance.
The supply output is reduced to 20 V and the resistor is replaced so that the power dissipated is still 100 W.

What is the percentage decrease in resistance?

[1 mark]

A 20 ○

B 36 ●

C 64 ○

D 80 ○

$P = \frac{V^2}{R}$

$\frac{V_1^2}{R_1} = \frac{V_2^2}{R_2}$

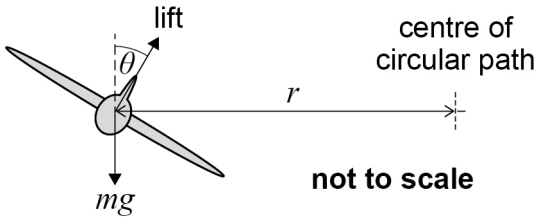
$\frac{R_2}{R_1} = \frac{V_2^2}{V_1^2} = \frac{20^2}{25^2} = 0.64$

$\therefore R_2 = 0.64 R_1$

$\therefore$ decreased by 36%

Do not write outside the box

3 0 When an aircraft turns in a horizontal circular path, it banks at an angle θ.



The aircraft has mass m and travels at constant speed v in a horizontal circular path of radius r. The lift force acts at the angle θ.

What is tan θ?

[1 mark]

$F = \frac{mv^2}{r} = L\sin\theta$

$mg = L\cos\theta$

$\frac{L\sin\theta}{L\cos\theta} = \frac{mv^2/r}{mg}$ $\tan\theta = \frac{v^2}{gr}$

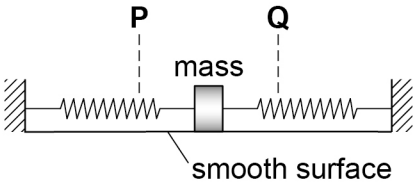
A $\frac{gv^2}{r}$ ⬭

B $\frac{rv^2}{g}$ ⬭

C $\frac{rg}{v^2}$ ⬭

D $\frac{v^2}{rg}$ ⬬ ✓

3 1 A mass, attached to two springs, oscillates horizontally between **P** and **Q**. The motion of the system is simple harmonic.



Which quantity has its magnitude at a minimum value when the mass is at **Q**?

[1 mark]

A the acceleration of the mass ⬭ max

B the kinetic energy of the mass ⬬ ✓

C the potential energy of the mass–spring system ⬭ max

D the resultant force of the springs on the mass ⬭ max
